Technology	Full 1 K Carbon Sandwich
Fin size	25
Fin box	tuttle
Fin range	22 - 28
Sail range	4,5 – 6,4

Really unbelievable how fast Speed Windsurfing gained importance in the windsurfing market again. Not only the pros but a lot of amateurs start speed sailing and compete at national and international speed events. But not only during the events the question is raising who the fastest is. Also at your local spots private speed duels are becoming more and more important. F2 delivers the perfect weapon for it. 2 sizes for all conditions. No more excuses not to be the fastest at the spot !!!! (the bigger brother of the Missile XS will be launched in summer 2006)

Scoop-Rocker line:

- The world record Scoop–Rocker line of Finian´s and Karins´ custom board has been transferred 100% 1:1 to our new production speed boards
- Top Speed without limits

Outline:

- Also the outline has been adopted 1:1 of Finian´s and Karin´s speed machines !
- Control is the most important – the better you feel on the board, the more you can sheet in and accelerate.

Bottom shape:

- Like the world record board the shape of the bottom has a double concave with stabilizing side flats which run into a flat „V“.
- Double concaves in the front section let the board hit the chop very smoothly.
- A flat V in the tail section provides maximum speed without limits.

Deck shape:

- The S-Deck Shape gives you a more comfortable posture and the lower mast foot position provides perfect control.

Rails:

- The boxy rails let the water rip off very low which avoids a sucking of the board.
- Also at competitions the rails provide very good pointing abilities and easy starting with low volume.

Attention: Only the Missile S which will be launches in July will have air pipes and adjustable cut-outs !!!
