

Pole position !

SX XS

Length	235 cm
Width	54 cm
Volume	81 ltr
Weight	5,1 kg (estimated)
Technology	Full 1 K Carbon Sandwich
Fin size	30 cm
Fin box	tuttle
Fin range	28 – 32 cm
Sail range	4,5 – 6,8 m²
Availability	Ex Cobra mid – end of April. exact date will be announced soon

Slalom is back and we take the pole position again!!

Slalom races dominate the regatta events, and F2 is again one step ahead after winning the PWA Slalom42 tour 2005. After this great success, it was not easy to increase the performance of the new SX range, again. That's why we are proud to launch as early release a new small size in our dominating SX range, especially designed to win high wind slalom races like e.g. in Pozo, Gran Canaria. We gave the new SX a unique racing finish which made it again faster, much easier to control and easier to ride. Ready to go for new victories !

Scoop-Rocker line:

- Same Scoop-Rocker line beyond the mast track in order to keep the performance, speed and control.
- Lifted Scoop-Rocker line in the front area in order to get smooth over the chop going down wind.

Outline:

- Narrow tail for more control going down wind and better jibing.
- Drop shape – modern, short and wide for much control and manoeuvrability.

Bottom:

- Parallel double concaves with stabilizing side flats running into a flat „V“ for best control and top speed.

Deckshape:

- S-Deck shape for perfect stance and posture.
- Significant better control in difficult conditions thanks to the lower position of the mast foot.

Rails:

- Thin rails rails at the tail for better control going down wind and much better grip in the jibes.

Cut-Outs:

- New hollow geometry of the cut outs releases the turbulences also alongside of the cut-out walls.
