

**WHILE STOCKS LAST**

# RS:X

## RIG COVER

[www.neilpryde-rsx.com](http://www.neilpryde-rsx.com)

The RS:X Rig Cover is made of strong reflective tarpee and can quickly and easily be attached to any RS:X rig when natural shade is not available. Start by attaching it to the foot of the sail, then the head followed by the clew. Secure using boom clip.

Using the rig cover may reduce the temperature of your rig by approximately 10°C making it equivalent to storing your sail in the shade. The temperature may be further reduced if the rig is subject to a light breeze allowing air to circulate over the rig through the mesh air ventilation panels.\*

**NeilPryde strongly recommend that you de-rig and store sails and masts out of the sun when not in use. Never leave your rig under tension and always make sure your rig is secure when not in use.**

\*Results may vary depending on location and conditions.
